

Introduction to Git and GitHub

What, Why and How?

About me

- Microservice Tester @ Ericsson
- Current Interest: Embedded Hardware
- Learning to play flute
- Love to play sports and cook
- [linkedin.com/in/faisal-hussain-elte/](https://www.linkedin.com/in/faisal-hussain-elte/)

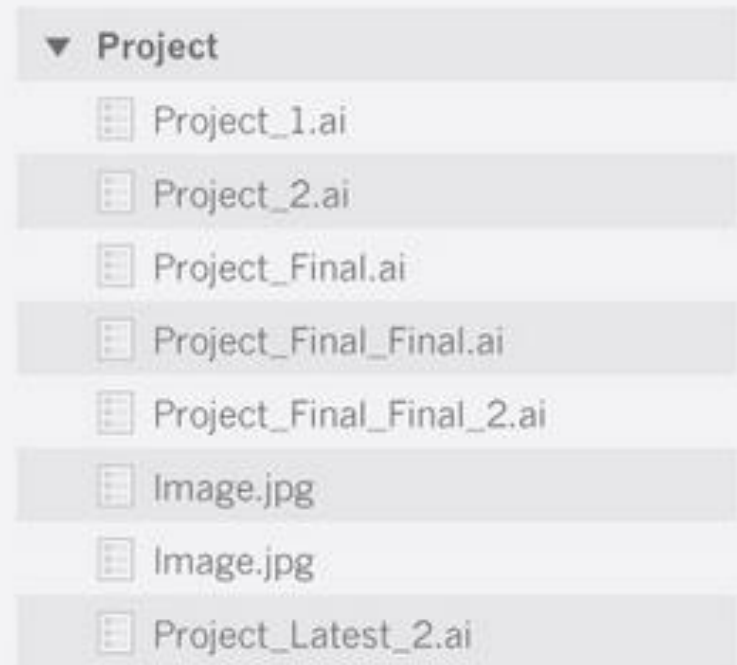

Understanding the problem

- The traditional way has only:
- CTRL+S
- CTRL+Z, CTRL+Y (Until you save)
- Doesn't work for more than 1 person
- Unorganized

Understanding the problem

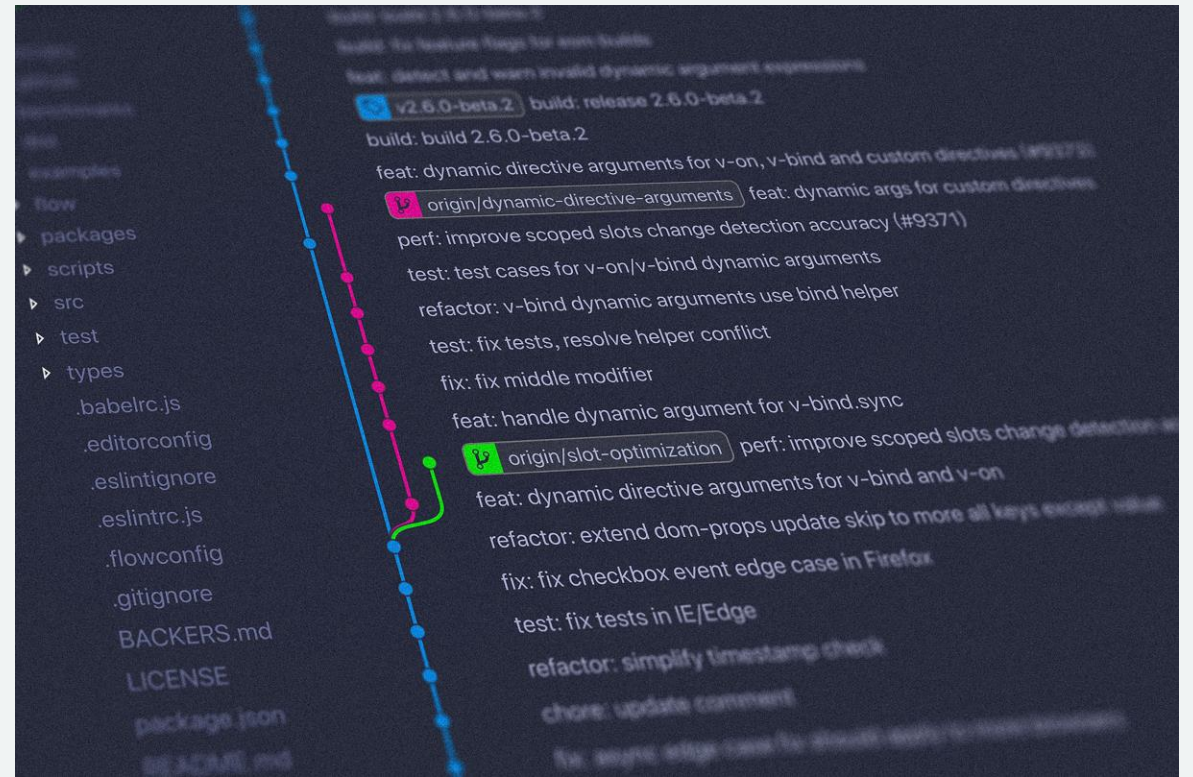

- What was changed?
- Why was it changed? Can you always remember this?
- Small changes but the size doubles
- Messy and difficult to collaborate with others
- It's painfully slow 🐢

Git Version Control

- Version Control = Track Changes 🐙
- Developed by Linus Torvalds 16 years ago
- Free and open source 💰
- Lightning fast
- Distributed (Spread out over the internet across multiple people)
- It's not only for code!
- It's a separate entity on it's own.

When and Where will I use this?

- Functional programming (IP-18fFUNPEG) [repository](#)
- Tools of software projects (IP-18KVPRJG)
- Software Technology (IP-12SRPRJG)
- Internship & Job
- Every project when you understand Git

- Largest code host in the world, with 40 million users and more than 190 million repositories
- Partly a social network
- Nice project management tools baked in

A screenshot of a GitHub profile for Monica Powell. The profile includes a circular profile picture of a smiling woman with dark hair. To the right of the picture are tabs for "Overview", "Repositories" (143), and "Projects". Below the picture, the name "Monica Powell" is displayed, followed by the username "M0nica". A bio reads: "Building tech to elevate people. Founder of React Ladies a community for React JS developers." Below the bio are buttons for "Follow" and "Sponsor", followed by statistics: "814 followers · 23 following · 213 stars". Location "New York, New York", email "github@aboutmonica.com", and website "https://www.aboutmonica.com" are listed. The main content area shows a repository named "M0nica / README.md" with a greeting "Hi, I'm Monica" and a small illustration of a person with a laptop. Below this is a large pink banner with the text "MONICA POWELL" and "software engineer, content creator & community organizer". To the right of the banner is an illustration of a woman with curly hair holding a laptop. At the bottom of the banner, a paragraph describes her as a software engineer passionate about open-source, mentioning her involvement in ReactJS, Jamstack, and GraphQL, and her role as the founder of React Ladies.

Overview Repositories 143 Projects

M0nica / README.md

Hi, I'm Monica 🙋🏾

MONICA POWELL

software engineer, content creator & community organizer

I'm a software engineer who is passionate about making open-source more accessible, creating technology to elevate people, and building community. Some technologies I enjoy working with include ReactJS, Jamstack (JavaScript, APIs + Markup) and GraphQL. I recently was selected to be an inaugural [GitHub Star](#) 🌟 based on my involvement in the tech community. My interest in the React ecosystem led me to launch [React Ladies](#), a community for women and non-binary ReactJS developers.

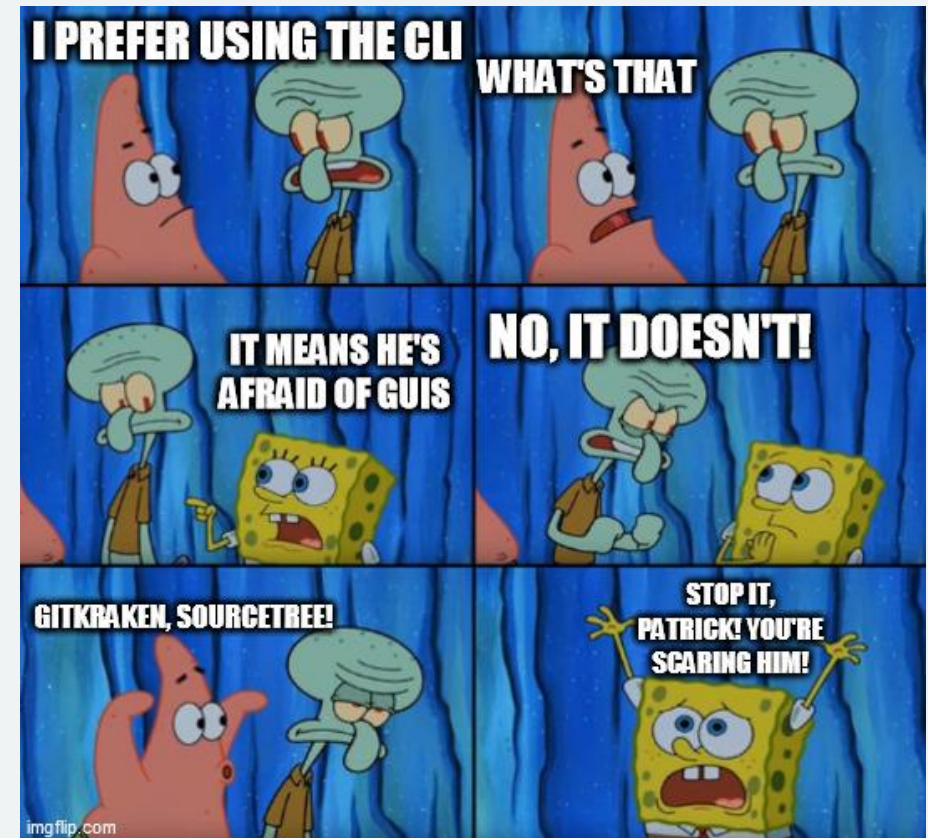

Find me around the web 🌐:

Simplified Git dictionary

Traditional	Git (Better at everything)
Download project.zip from google drive	git clone <repository url>
Download project_final.zip	git fetch
Create a new folder to start a new idea	git branch
CTRL+S	git commit
Make a new .zip and upload to google drive	git push
Open 2 windows and compare manually	git diff
CTRL+Z and CTRL+Y	git checkout
A folder	Repository (repo)

Command Line vs GUI

- Better to learn CLI as most of the help online is in the form of CLI commands
- If you learn the git commands then you can use every gui easily but not the other way around.
- In reality you will end up using both.

Children's Stories

- Management wants to start a story series about a cat and mouse and their adventures.
- Using both Git and Github
- Collaboration between many writers
- The aim is to understand the concepts through an easy example.

Setting up Git

- Install git from git-scm.com with default settings
- `git config --global user.name "William Hanna"`
- `git config --global user.email "william.hanna@nbc.com"`

Creating our repo

- <https://github.com/new>

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Owner *

NobleAscent ▾

Repository name *

/ stories ✓

Great repository names are short and memorable. Need inspiration? How about [refactored-octo-fortnight?](#)

Description (optional)

Public

Anyone on the internet can see this repository. You choose who can commit.

Private

You choose who can see and commit to this repository.

Initialize this repository with:

Skip this step if you're importing an existing repository.

Add a README file

This is where you can write a long description for your project. [Learn more.](#)

Add .gitignore

Choose which files not to track from a list of templates. [Learn more.](#)

Choose a license

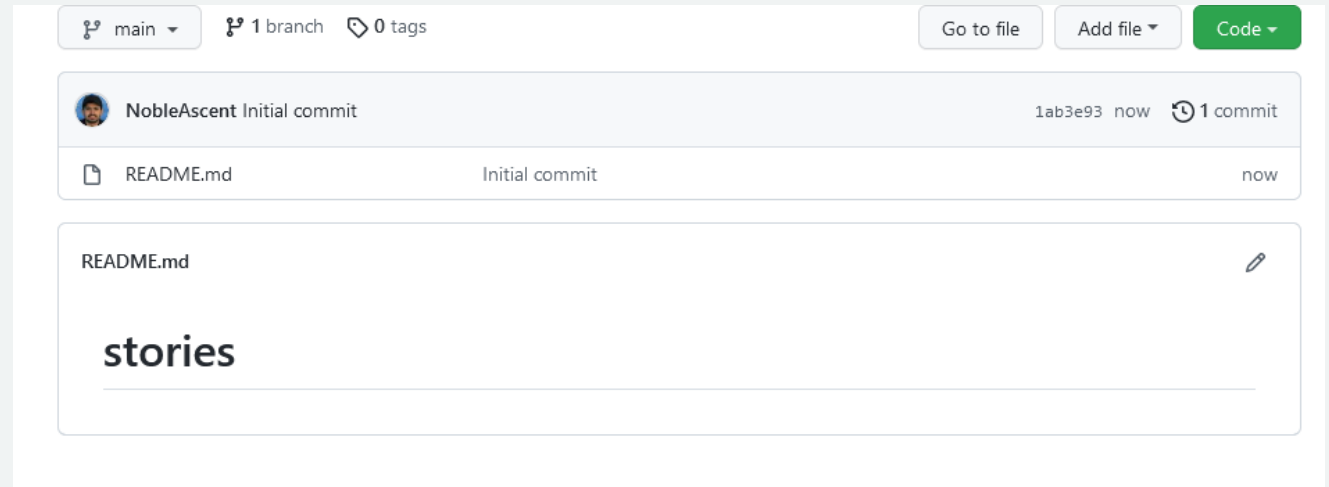

A license tells others what they can and can't do with your code. [Learn more.](#)

This will set main as the default branch. Change the default name in your [settings](#).

Create repository

Our Repository

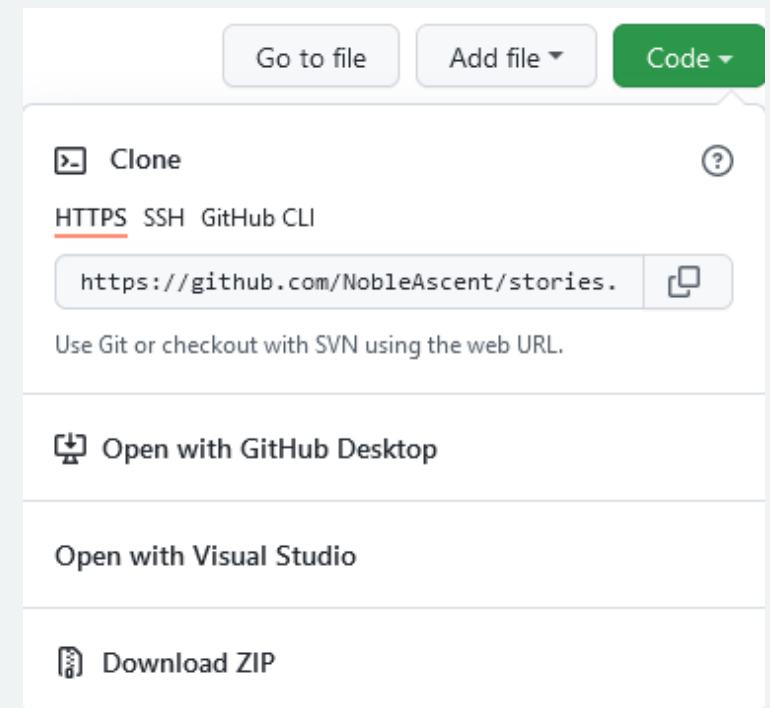

- Homepage/Dashboard
- Current Branch
- Number of branches and tags
- Number of commits
- Current commit hash (ID)
- Renders the readme file

Git clone

- Create a copy of the repository locally
- Clone using the HTTPS link
- `git clone https://github.com/NobleAscent/stories.git`
- Clone output really doesn't matter unless there is an error

```
remote: Enumerating objects: 3, done.  
remote: Counting objects: 100% (3/3), done.  
remote: Total 3 (delta 0), reused 0 (delta 0), pack-reused 0  
Receiving objects: 100% (3/3), done.
```

.git

- This is what makes git work.
- Just don't delete it or play with it.
- It's hidden by default

```

                  1 File(s)          9 bytes
                  3 Dir(s)  79,168,589,824 bytes free
```

```
C:\Users\John\Desktop>git status
fatal: not a git repository (or any of the parent directories): .git
```

Our First Story

Jinx hides among some toy soldiers, but Tom spots him and the mouse runs off, saluting the cat like a real soldier would.

The mouse hides inside a Christmas fairy light, causing him to glow. Not fooled, Tom grabs Jinx and is promptly electrocuted.

Jinx then runs out of teh house through the letterbox of the front door. As Tom opens the lid of the letterbox to see where Jinx has gone, Jinx hurls a snowball at his face. Tom angrily barricades the slot to prevent Jinx from getting back into the house.

Git status

```
C:\Users\John\Desktop\stories>git status
On branch main
Your branch is up to date with 'origin/main'.

Untracked files:
  (use "git add <file>..." to include in what will be committed)
    The Night Before Christmas.txt.txt

nothing added to commit but untracked files present (use "git add" to track)
```

- What's up?
- We must add files we want git to track. (Green)
- Untracked means that git is ignoring this file. (Red)
- git add .

```
C:\Users\John\Desktop\stories>git add .
C:\Users\John\Desktop\stories>
```

Git status

```
C:\Users\John\Desktop\stories>git status
On branch main
Your branch is up to date with 'origin/main'.

Changes to be committed:
  (use "git restore --staged <file>..." to unstage)
    new file:   The Night Before Christmas.txt.txt
```

- Git add takes the file from untracked to staged. (Green)
- Only staged files are included in a commit.
- Adding and editing files is not very different.

Git commit

- Commit messages tell us what and why?
- 5fe4f2f is the identifier of the commit
- Write good commit messages so the intent and execution are clear
- Bad commit messages cause headaches

```
C:\Users\John\Desktop\stories>git commit -m "It's december  
so I wrote a christmas story with lots of toys and gifts"  
[main 5fe4f2f] It's december so I wrote a christmas story w  
ith lots of toys and gifts  
1 file changed, 11 insertions(+)  
create mode 100644 The Night Before Christmas.txt.txt
```

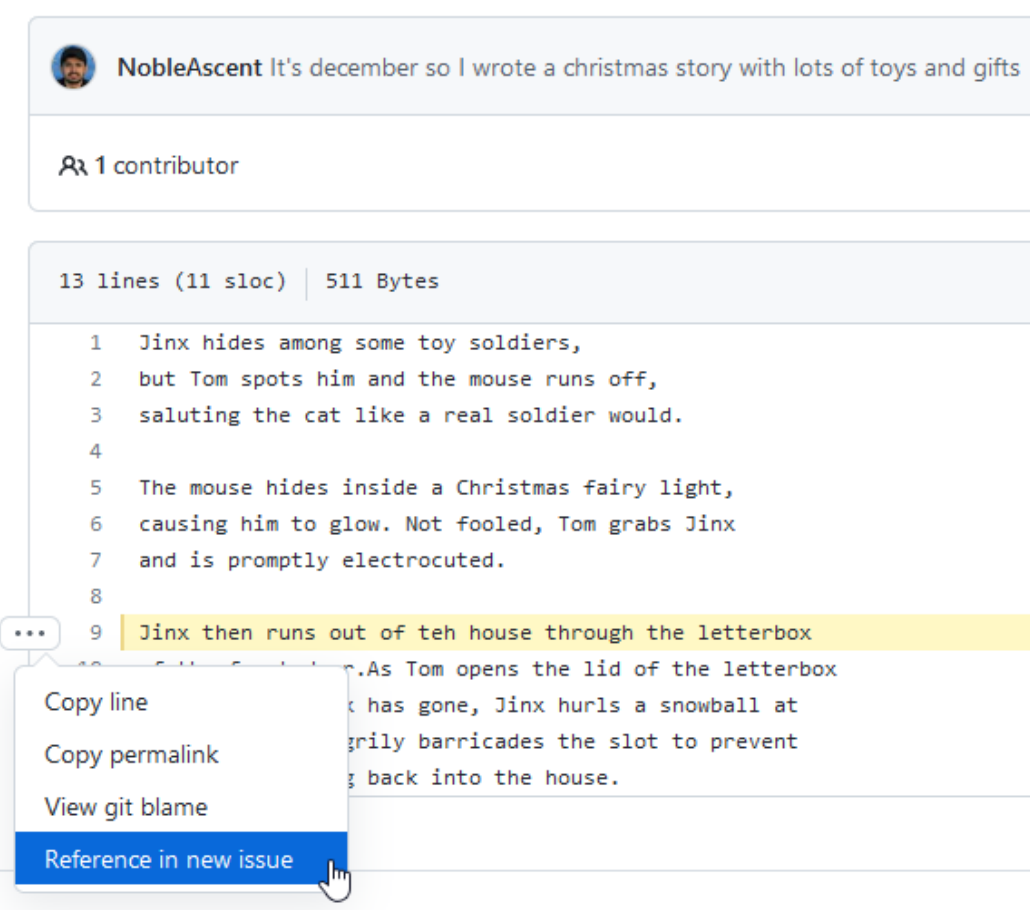

Git push

- Lets show it to the boss
- 5fe4f2f is the identifier of the commit
- Just tells us statistics about it's performance

```
C:\Users\John\Desktop\stories>git push
Enumerating objects: 4, done.
Counting objects: 100% (4/4), done.
Delta compression using up to 4 threads
Compressing objects: 100% (3/3), done.
Writing objects: 100% (3/3), 640 bytes | 640.00 KiB/s, done.
Total 3 (delta 0), reused 0 (delta 0), pack-reused 0
To https://github.com/NobleAscent/stories.git
  1ab3e93..5fe4f2f  main -> main
```

Giving feedback

- Lets point out some problems and improvements
- Go over the commit and select the line to reference
- Create an issue

The screenshot shows a GitHub commit diff for a file named 'christmas_story.txt'. The commit is by user 'NobleAscent' with the message 'It's december so I wrote a christmas story with lots of toys and gifts'. The diff shows 13 lines (11 sloc) and 511 Bytes. The code is a Christmas story. Line 9, 'Jinx then runs out of teh house through the letterbox', is highlighted in yellow. A context menu is open over this line, showing options: 'Copy line', 'Copy permalink', 'View git blame', and 'Reference in new issue'. The 'Reference in new issue' option is highlighted in blue and has a mouse cursor pointing at it.

NobleAscent It's december so I wrote a christmas story with lots of toys and gifts

Giving feedback

- Tag developers
- Tag a specific commit or line
- Attach files and paste screenshots

Issues in the first story

Write Preview

H B I      @  

The script is good but there need to be some modifications

1. Spelling mistake:
<https://github.com/NobleAscent/stories/blob/5fe4f2f7725ed8abddd84b0e9f8972109044c4eb/The%20Night%20Before%20Christmas.txt.txt#L8>
2. The filename contains the extension twice
3. Management has decided to rename the mouse to jerry

Attach files by dragging & dropping, selecting or pasting them. 

 Styling with Markdown is supported

Submit new issue

Giving feedback

Quick Recap

- Commands we had to run once:
clone
- Commands we had to run multiple times:
add, commit, push
- Optional commands but very helpful:
diff

Medium Git Workflow

- branch (A copy for experimentation)
- checkout (Switch and Use the specified branch)
- add
- commit
- push
- pull request (Merge the branch)
- Demo time (<https://git-school.github.io/visualizing-git/>)
